Vegetation Clearing and Fauna Management Plan - Notes

Introduction

The Environmental Management Division of the **Saunders Havill Group (SHG)** was engaged by **Queensland Health** to prepare a Vegetation Clearing and Fauna Management Plan (VCFMP) for the proposed Bundaberg Hospital site at Lot 23 Bundaberg Ring Road, Thabeban, QLD, 4670 (Lot 23 on SP212513).

The purpose of this plan is to manage the vegetation removal process and the protection of fauna species within the disturbance area. This VCFMP has been prepared for Bundaberg Regional Council (BRC)/Economic Development Queensland (EDQ) and is required to be approved prior to clearing works commencing. The clearing works will follow general principles for vegetation clearing documented on this sheet and *Sheet 3*, and all Council/EDQ specific requirements.

This VCFMP has been produced by overlaying the following site datasets to determine impacts and disturbance on existing vegetation:

1. Tree data including specimen details & features (RPS, 2023)
2. Site Inspection of Existing Vegetation (RPS, 2023)
3. Site Layout Plans (Stantec, 2023)
4. Arborist inspection (TBD)

Project Management

Vegetation management and processes are an integral part of the construction and operational works phases. The site supervisor is responsible for all onsite works including overseeing vegetation clearing, health and safety of fauna and adhering to Council's / EDQ's conditions and guidelines and Australian Standards - Protection of Trees on Development Sites AS4970-2009 and Pruning of Amenity Trees AS4373-1996.

When required, the project arborist (with minimum AQF Level 5 in Arboriculture and minimum 5 years' experience) is responsible for: undertaking all appropriate arboricultural measures prior to the commencement of any earthworks on site to ensure the survival and long-term health of existing trees to be retained. These measures may include soil decompaction, soil aeration, fertilising, mulching, watering, root or crown reduction and hazard reduction or as otherwise determined by the arborist. The site arborist is also required to direct and supervise all works within TPZs of trees to be retained, and perform arboricultural care requirements where necessary.

The roles and responsibilities of the Fauna Spotter-catcher are provided on *Sheet 3*.

Site Contacts

Site and consulting contacts for queries relating to vegetation clearing include:

| | |
|---|---|
| Client Contact: Queensland Health | Environmental Contact: Saunders Havill Group E: mail@saundershavill.com |
| Site Contractor: <i>To be advised</i> | Site Arborist: <i>To be advised</i> |
| Site Fauna spotter-catcher: <i>To be advised</i> (Refer to <i>Sheet 3</i> for responsibilities) | Site Bushfire Consultant: <i>To be advised</i> |

Clearing Phases and Process

PHASE 1 - Tree Protection Fencing to be installed

Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing to be located at or beyond 12 x diameter at breast height (DBH) (AS4970-2009 Protection of trees on development sites)—unless approved by the appointed arborist. Signs identifying the tree retention area as a 'no go zone' to be installed at regular intervals along tree protection fencing.

PHASE 2 - Council Pre-start Meeting (if required by Council/EDQ)

Fencing shall be in place at the time of the official pre-start meeting for inspection and sign off by Council/EDQ Officers.

PHASE 3 - Fauna Inspections and Management

Undertake necessary fauna management requirements prior to clearing works - as a minimum, this should include the specifications listed on *Sheet 3*, and acknowledge specific Council/EDQ approval requirements.

PHASE 4 - Undertake Bulk Clearing

Undertake wholesale removal of vegetation once approved for removal by a qualified fauna spotter and all necessary permits are obtained. Clearing will occur in the direction outlined in *Sheet 5* of this VCFMP, and managed by the appointed fauna spotter-catcher to allow all fauna to move unimpeded towards retained vegetation on, and adjacent to, the site.

Vegetation clearing techniques:

- i. By utilising the most appropriate machinery and equipment during vegetation clearing, the probability of injury or death of wildlife during clearing can be significantly reduced or eliminated while still maintaining an efficient vegetation removal process.
- ii. Suggested techniques are as follows: (a) a vertical tree grab attachment on an excavator (30 tonne) can be used to pull entire trees in size up to 30-40cm diameter at a height measured at 1.3 metres above ground level and lay them down in a steady controlled fashion, allowing inspection by a fauna spotter-catcher (b) where large trees are too large for a vertical tree grab and have been identified, an elevated work platform or where practical, cherry picker should be used in conjunction with a chainsaw operator and fauna spotter-catcher. Alternatively, careful removal of hollow section from habitat tree and gentle lowering for inspection by fauna spotter-catcher (c) the use of bulldozers to clear vegetation is limited to vegetation that has been thoroughly inspected by a fauna spotter-catcher and is found to contain no fauna or potential habitat. Bulldozers are not to be used to push over large trees that contain hollows or other habitat features.

NOTE: Dogs are not permitted onsite at any time during construction. Construction works including clearing must occur between the hours of 6.00am and 6.00pm.

Access and Stockpiling

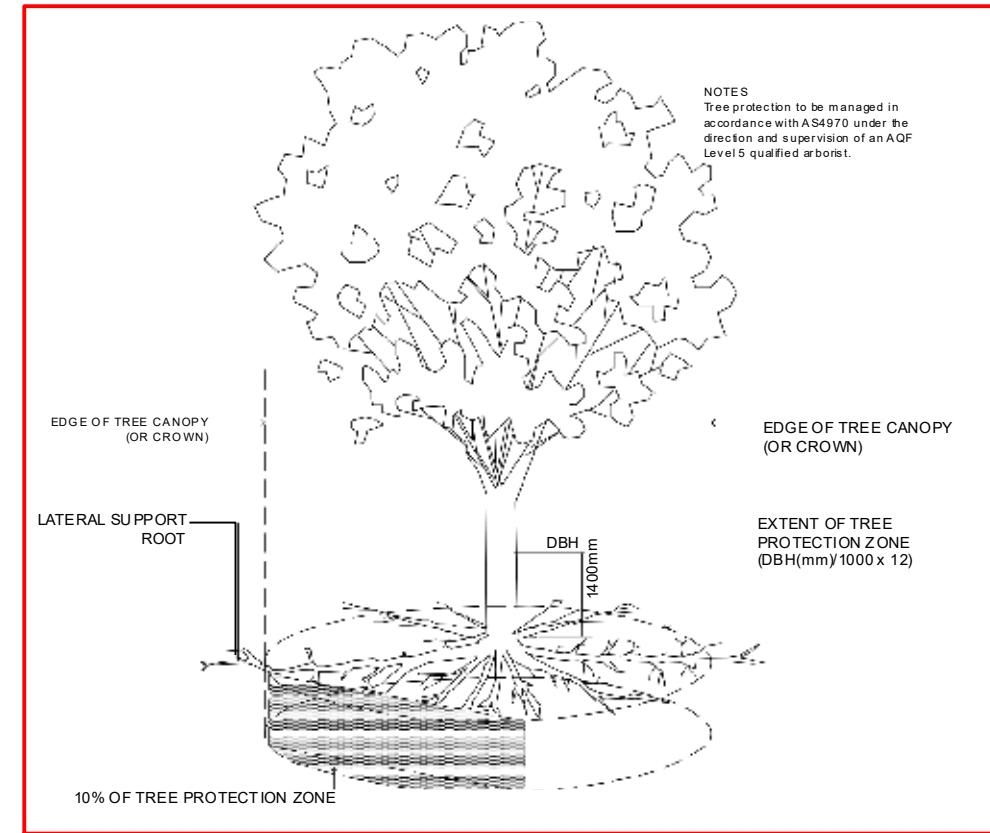

Vegetation stockpiling locations are to be designated in easily accessible areas outside of TPZs. Indicative vegetation stockpiling locations have been allocated within the clearing area, allowing for material to be easily delivered and stored. These locations are subject to minor change according to cut/fill activities and intended location for reuse.

Cleared vegetation free of weeds is to be reused on or off the project site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage (e.g. custom milling). Trees with identified hollows should have the hollow section preserved and should be suitably mounted on nearby or adjacent suitable trees.

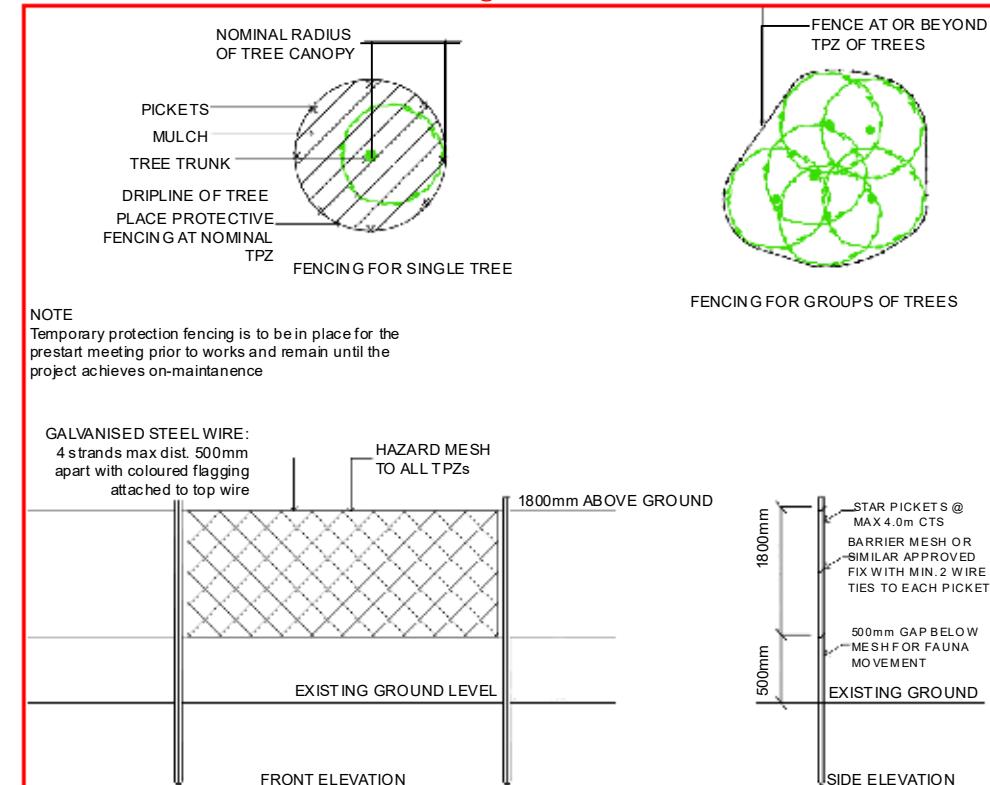

Maintenance

After tree clearing works on site, an analysis of the vegetation's health and growth should be undertaken by the project arborist to determine specific maintenance needs. Follow-up maintenance works should be carried out on retained vegetation where required. If conditioned in the approval—the project arborist may be required to submit a report to Council/EDQ detailing the measures undertaken during the construction period and any further work required post this period.

Tree Protection Zone - Detail (not to scale)

Bundaberg Ring Road, Thabeban

Vegetation Clearing and Fauna Management Plan - Notes

Introduction

The Fauna Management specification on this VCFMP is designed to protect native animals and control/manage impacts during the vegetation clearing works. The clearing area occurs within the northern and south-western sections of the site. The site abuts cleared land and active construction zones to the north and west, Bundaberg Ring Road to the south, and a brewery and other industrial land uses to the west. Common species associated with semi-urban landscapes were spotted at the clearing area during the field assessment. The fauna management specifications and principles incorporated in this VCFMP apply generically to all native animals and focus on avoiding conflicts and incorporating measures to minimise disturbance. Compliance with this section of the VCFMP is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the **Department of Environment and Science**). The management protocols outlined in the following section can vary at the site, as determined by the registered fauna spotter catcher or arborist.

Fauna Impacts

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities may be altered during and post vegetation clearing works. Potential impacts include:

Construction Impacts

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment
- Loss of food sources
- Excavation/compaction/changes in ground levels
- Altering hydrological flows
- Fragmentation of habitat

Operational Impacts

- Weed introduction (garden escapees)
- Increased hydrology with increased hardstand
- Altering of run-off chemical and nutrient components (quality)
- Barriers to fauna movement
- Vehicles and pedestrian movement and trespass
- Introduction of domestic and predatory species

Fauna Management Schedule

| 1.0 Pre - Clearing | | | | |
|-------------------------|--|---------------------------------|---|---|
| Ref: | Management Item | Responsibility | Timing | Reporting |
| 1.1 | Temporary Fencing Prior to the commencement of works and to be inspected by the site Environmental Coordinator and/or Project Arborist—Delineate areas where vegetation is proposed to be retained with exclusion fencing to prevent accidental felling. Clearing is to be undertaken in accordance with AS 4970-2009 Protection of Trees on Development Sites. <ul style="list-style-type: none"> ▪ Fencing shall be fauna friendly ▪ No clearing, stockpiling, site access, earthworks, storage, etc. is to occur within the temporary protection fencing ▪ Only approved weed management works to occur within the temporary protection fencing ▪ Fencing to be reinstated immediately if damaged or knocked down, any damage to retained trees to be immediately reported to Project Arborist. ▪ Fencing to remain until the completion of all site works. | Site Supervisor | Prior to the commencement of clearing | Inspected by Council / EDQ and Project Arborist |
| 1.2 | Contractor Education & Awareness All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP are provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training on a broader work place health and safety but as a minimum will include: <ul style="list-style-type: none"> ▪ Copy of VCFMP kept on-site (Site Office). ▪ General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP. ▪ A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office. | Site Supervisor / The Proponent | Prior to the commencement of clearing and as part of the site induction for new staff and sub-contractors | Site Supervisor |
| 1.3 | Fauna Spotter-Catcher / Relocator Immediately prior to the commencement of clearing of native vegetation, a daily visual inspection of the area must be carried out by a qualified fauna spotter-catcher holding a valid Rehabilitation Permit from the relevant State Government Agency. The fauna spotter-catcher should clearly flag vegetation found to contain fauna or fauna habitat (such as tree hollows, arboreal termite mounds, stick nests or possum drays with flagging tape and verbally communicate this information to the tree feller to ensure flagged trees are not felled until authorised by the fauna manager. | Site Supervisor | Prior to the commencement, of clearing | Inspected by the Fauna Spotter-catcher |
| 2.0 Vegetation Clearing | | | | |
| 2.1 | Fauna Spotter-Catcher / Relocator The qualified fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, a suitable buffer area (as determined by the fauna spotter-catcher) should be established around the animal's location that excludes machinery until it has relocated at its own accord (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the Department of Environment & Science . For some fauna, specific permit requirements may apply. If vegetation is left stockpiled for more than 12 hours or overnight, the fauna spotter-catcher must inspect the vegetation prior to chipping or removal from site. The Fauna Spotter-catcher will manage the care of any injured or orphaned wildlife (e.g. veterinary attention or delivery to a wildlife carer). Any native fauna listed as a threatened species under the Nature Conservation Regulation 2020 that are injured or orphaned by the development process, must be reported to the Department of Environment & Science (1300 130 372). Any other injured or orphaned fauna must be reported through the Rehabilitation Permit return process by the Fauna Spotter-catcher. The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements. | Site Supervisor | During / post clearing | Inspected by the Fauna Spotter-catcher |
| 2.2 | Specific Koala Management Notes A Koala/Fauna spotter-catcher is a person who holds a valid Rehabilitation Permit from the relevant State Government Agency, and has either a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons' representative, of the precise location of each such tree Management item. | Site Supervisor | Prior to the commencement, and during clearing | Inspected by the Fauna Spotter-catcher |

Bundaberg Ring Road, Thabeban

Vegetation Clearing and Fauna Management Plan - Notes cont.

| 2.0 Vegetation Clearing (cont.) | | | | |
|---------------------------------|--|-----------------|--|--|
| 2.3 | <p>Clearing Pattern / Fauna Flushing Clearing occurs once the fauna spotter-catcher gives sign off the site is clear of all native species and all necessary permits are obtained. The intended clearing direction is towards retained vegetation. Clearing direction is subject to amendment by the fauna spotter-catcher. At the completion of operational works, and prior to the sealing of survey plans for the relevant stage, the fauna spotter-catcher must provide certification to Council / EDQ officers that all works were undertaken in accordance with these fauna management requirements and specific Council/EDQ requirements.</p> | Site Supervisor | Prior to the commencement, and during clearing | Inspected by the Fauna Spotter-catcher |
| 2.4 | <p>Specific Habitat Tree Notes Where possible, clearing of habitat trees is to be avoided during late winter and spring (typically July – October) when many native birds are actively nesting/have young in nests and arboreal mammals have dependent and/or pouch young.</p> | Site Supervisor | Prior to the commencement, and during clearing | Inspected by the Fauna Spotter-catcher |
| 2.5 | <p>Hollow / Habitat Feature Salvage Notes Hollows and other habitat features such as large fallen logs, log piles, rock piles or outcrops may provide important refuges / protection for fauna within bushland and open space areas near the development site. There are currently no regulatory guidelines in Queensland for the salvage and reinstallation of hollows and habitat features at development sites. The information below has been extracted from nest box installation material provided by MBRC, Redland and Ipswich City Council, and "Nest boxes for wildlife, a practical guide" by Alan and Stacey Franks (2015). The salvage and reinstallation of hollows and habitat features is to be undertaken by / or under the supervision and direction of a suitably qualified fauna spotter-catcher or arborist, and in accordance with these guidelines. The reinstallation of hollows and habitat features is required to comply with the bushfire management requirements of the receiving area.</p> <p>Salvage from clearing area:</p> <ul style="list-style-type: none"> ▪ Hollows should only be salvaged in circumstances where clearing of habitat trees cannot be avoided. ▪ Habitat or hollow-bearing trees are to be felled last and cleared using special plant and equipment aimed at reducing the risk of death or injury to occupying fauna ▪ Donor habitat tree particulars to be documented by the suitably qualified fauna spotter-catcher or arborist prior to salvage—including but not limited to tree species, height and diameter at breast height (DBH), height above ground and aspect of hollow, any other significant features. ▪ Hollow / habitat feature sections from each identified habitat tree to be carefully removed by, or under direction and supervision of a suitably qualified fauna spotter-catcher or arborist. All additional trees to be inspected on ground to ensure all habitat features are salvaged from the clearing area. ▪ Additional habitat features, such as site logs and rock should be inspected by the fauna spotter-catcher prior to relocation. <p>Reinstallation at receiving area:</p> <ul style="list-style-type: none"> ▪ Hollows are to be salvaged and reinstalled at a suitable receiving area within an environmental area onsite, or as close to the site as possible. ▪ The salvaged hollow is to be reinstalled in a similar tree specimen, and at a similar height and aspect as the donor tree where it is practical and safe to do so. ▪ As a general rule, salvaged hollows should be positioned: <ul style="list-style-type: none"> ◦ in a tree species preferred by the target fauna species. For example, Phascogales prefer rough-barked trees whereas Scaly-breasted Lorikeets prefer smooth-barked or dead trees ◦ at a location in the receiving tree to meet the target species requirements ◦ high enough in the receiving tree to reduce the chances of predation by introduced fauna species, and out of reach of humans. Greater than 4 metres (12 feet) above ground level is recommended to minimise predation from cats ◦ away from potential edge effects to further mitigate feral uptake ◦ where they can be easily inspected/maintained ◦ away from bright lights ◦ in a direction that is protected from severe storms and / or prevailing winds. A north-east to south-east aspect is preferred by many species ◦ in a location that is shaded during the hottest parts of the day. ◦ Where they are least vulnerable to branch fall ◦ level with a tree branch to provide easy access for fauna ◦ firmly mounted with least impact to the tree ▪ If not practical or safe to install a tree hollow / habitat feature in a tree at the receiving area, it should be positioned on ground providing there are no conflicts with bushfire requirements at the receiving area. <p>Other habitat features may be strategically positioned at the receiving area to optimise habitat and movement opportunities for fauna. Where possible, rocks and log material should be piled to increase habitat values.</p> | Site Supervisor | Prior to the commencement/ and during clearing | Fauna spotter-catcher or arborist |
