This Rehabilitation Plan has been prepared to provide preliminary guidance to the weed management and revegetation of the larger balance bushland areas created through the construction of the Bundaberg Hospital. Specifically the plan outlines areas for rehabilitation based on minor site works to formalise storm water swales on existing drainage low points through the site and the creation of a formal wetland at a natural low point. In these primarily lineal footprints the land will be sculpted and shaped in accordance with the specific parameters of the construction methodology outlined by CPB Constructions. Exposed land will be extensively revegetated with native species endemic to the site and local area. Revegetation works are dominated by native grasses, ground covers and shrub species as and extensive tree canopy remains over the area.

Additionally weed species identified through the various ecological surveys will be managed in accordance with the specifications in this document.

This management plan should be considered in conjunction with the CPB Constructions Memo titled: *Preliminary Southern Swales, Basin and Bunding Construction Methodology (31/10/2023)* which documents a raft of control and management measures to minimise the disturbance from the proposed works.
